EDUCATION

DIPLOMA IN UNITY GAME DEVELOPMENT
Big Boy School of Gaming
- Kochi 2024

CORE COMPETENCIES

- Unity2D& Unity3DDevelopment
- C# Programming
- Multiplayer Networking (Photon, Mirror, Unity Net code)
- Server-Authoritative Architecture REST API
- Object Pooling & Performance Optimization AI
- Systems (Minimax, Heuristic-Based AI)
- Scriptable Objects & Coroutines
- Unity UI & DOTween
- Git & GitHub
- AI & Decision-Making Systems

CERTIFICATION

DIPLOMA IN UNITY GAME DEVELOPMENT
Big Boy School of Gaming
-Kochi 2024

Completed a diploma in Unity Game development gaining hands-on experience in Unity 2D, Unity 3D, and C# programming.
Developed practical skills in creating immersive games and interactive applications within a few intensive months.

KEY ACHIEVEMENTS

- Mentored junior Unity developers, improving code quality, development practices, and architectural consistency across projects.
- Diagnosed and resolved complex Unity issues, including UI optimization bottlenecks, memory performance challenges, and asset
- Conducted R&D for upcoming features, evaluating technical feasibility and defining scalable implementation strategies.
- Designed and implemented constraint based state validation and filtering algorithms to eliminate unsolvable possibilities during procedural generation in strategy-based game systems.

ABOUT

Passionate Game Developer with 2 years of experience in Unity and C#, focused on developing engaging 2D and 3D games. Skilled in gameplay programming, AI, multiplayer systems, UI development, and performance optimization. Experienced in building scalable and reusable game systems across multiple genres. Strong problem solving abilities with a keen interest in learning new technologies and creating innovative gameplay experiences. Adept at debugging complex technical issues and translating ideas into polished gameplay features.

PROFESSIONAL EXPERIENCE

Infocom Software Pvt.Ltd | Dec2024 - May 2026
Associate developer - UNITYENGINE
Slams Edu tech, Kochi | May 2026 - Present

- Developed and maintained 2D and 3D games using Unity and C#. Implemented multiplayer systems using Photon with real-time player synchronization.
- Designed server-authoritative architecture to prevent desynchronization and cheating.
- Improved runtime performance using object pooling and optimized update cycles..
- Used ScriptableObjects for scalable and reusable game configuration. Implemented UI animations and feedback systems using DOTween.

PROJECTS

Selected Unity Game Development Projects

Developed and contributed to a diverse portfolio of Unity-based games across strategy, puzzle, simulation, multiplayer, arcade, and action genres. Worked on gameplay programming, game mechanics, AI systems, UI, physics, procedural generation, player interaction, and performance optimization. Projects include 2D Battleship, Tower Defense, Liquid Sort, First-Person Shooter (FPS), Flight Simulator, Solitaire Collection, Rocket Launcher, Fruit Game, Cars of Voice, and Battleship Multiplayer, demonstrating experience in building varied gameplay systems and reusable Unity architectures.

- Battleships (2D Multiplayer Game)
 - Tower Defense
 - Liquid Sort
 - First-Person Shooter(FPS)
 - Flight Simulator
- Solitaire Collection
 - Rocket Launcher
 - Fruit Game
 - Cars Of Voice
 - Battleship 2D

TECHNICAL SKILL

Unity Game Engine
C# Programming
2D &3D Game Development
Gameplay Programming
Git / Version Control

Sprint Planning & Coordination
Code Review
Performance Optimization
Memory Management
Debugging & Profiling
